- Needle files with escapements are distinguished by the square shape of their shank, which allows them to be used without a handle. **HISTORY** In watchmaking, the escapement is a mechanism placed between the source of energy (spring, weight, etc.) and the regulating organ. This key organ requires extremely fine filing. **USE** Used in the manufacture of tools on extremely small profiles and in precision mechanics. Works with low material removal and adjustment work. Remarkably effective on metals such as steel, gold, platinum, titanium. **CHARACTERISTICS** Sharp angles, pointed and cut ends. Made from chrome steel. Hardness 66 HRC. High precision blanks. Very high regularity of size. Swiss made. Internationally recognized Vallorbe quality.
